39 Git Commands

(you must know)

GitHub-Specific Commands

- **gh auth login:**
  Logs into GitHub via the command line

```
gh auth login
```

- **gh repo clone:**
  Clones a GitHub repository

```
gh repo clone user/repo
```

- **gh issue list:**
  Lists issues in a GitHub repository

```
gh issue list
```

- **gh pr create:**
  Creates a pull request on GitHub

```
gh pr create --title "New Feature" --body "Description of the feature"
```

- **gh repo create :**
  Creates a new GitHub repository

```
gh repo create my-repo
```

Advanced Commands

- **git bisect:**
  Finds commit that introduced a bug

```
git bisect start
```

- **git blame:**
  Shows which commit & author modified each line of a file

```
git blame file.txt
```

- **git reflog:**
  Logs changes to branch tips

```
git reflog
```

- **git submodule:**
  Manages external repositories as sub-modules

```
git submodule add https://github.com/user/repo.git
```

- **git archive:**
  Creates an archive of repo files

```
git archive --format=zip HEAD > archive.zip
```

- **git gc :**
  Cleans & optimizes the repository

```
git gc
```

Tagging

git tag :

Creates a tag for a commit

```
git tag -a v1.0 -m "Version 1.0"
```

git tag -d:

Deletes a tag

```
git tag -d v1.0
```

git push --tags :

Pushes tags to remote repository

```
git push origin --tags
```

Stashing & Cleaning

git stash:

Save uncommitted changes

```
git stash
```

git stash pop:

Applies & removes stashed changes

```
git stash pop
```

git stash list :

Lists all stashes

```
git stash list
```

git clean:

Removes untracked files

```
git clean -f
```

Remote Repositories

git remote:
Manages remote repository connections

```
git remote add origin https://github.com/user/repo.git
```

git push:
Sends changes to a remote repository

```
git status
```

git pull:
Fetches & merges changes from a remote repository

```
git pull origin main
```

git fetch:
Downloads changes from a remote repository without merging

```
git fetch origin
```

git remote -v:
Lists the URLs of remote repositories

```
git remote -v
```

Branching and Merging

- **git branch:**
  Lists or creates a new branch

```
git branch feature-branch
```

- **git checkout:**
  Switches between branches or restores files

```
git checkout feature-branch
```

- **git switch:**
  Switches branches

```
git switch feature-branch
```

- **git merge :**
  Combines changes from one branch into another

```
git merge feature-branch
```

- **git rebase:**
  Moves or combines commits from one branch onto another

```
git reset HEAD file.txt
```

- **git cherry-pick:**
  Applies specific commits from one branch to another

```
git cherry-pick <commit-hash>
```

Basic Commands

- **git config:**
  Configures user settings, such as name & email

```
git config --global user.name "Your Name"
```

- **git log:**
  Shows the commit history

```
git log
```

- **git show:**
  Displays detailed information about a specific commit

```
git show <commit-hash>
```

- **git diff :**
  Shows changes between commits, the working directory, & the staging area

```
git add file.txt
```

- **git reset:**
  Unstages changes or resets commits

```
git reset HEAD file.txt
```

Basic Commands

- **git init:**
  Initialize a new Git repository in the current directory

```
git init
```

- **git clone:**
  Copies a remote repository to the local machine

```
git colone
https://github.com/user/repo.git
```

- **git status:**
  Displays the state of the working directory & staging area

```
git status
```

- **git add:**
  Adds changes to the staging area

```
git add file.txt
```

- **git commit :**
  Records changes to the repository

```
git commit -m "Initial commit"
```
